Summary

Software Engineer II at Indeed with a UX background and 6+ years of frontend experience. Builds accessible product UI in React, TypeScript, and JavaScript, from Figma to prototype to production with the company design system. Documents own components in Storybook. Partners with product managers and designers to ship features and leads pre-launch QA: bug bashes, test cases, testing instructions, and follow-up before release. Uses agentic workflows at work with Claude Code and Cursor. Designs and builds personal products end to end.

Experience

Associate UX Developer / UX Developer / Software Engineer II, Indeed (Austin, TX)

Oct 2021 to Present

- **Design to code:** Partner with product managers and designers to ship production React UI from Figma designs for the Indeed employer application. Prototype in code so the team can test ideas in the browser early.
- **UI polish:** Contribute to page redesigns with UX and product, add right-to-left (RTL) language support and translations, and fix UI bugs across the product.
- **Feature planning:** Plan and ship employer-facing product features, such as AI-generated candidate summaries. Plan the architecture with AI codebase analysis (Claude Code, Cursor), split work into tickets, and write changes across repositories.
- **Components and data:** Build responsive layouts and components with Storybook docs, unit tests, and accessibility support. Query data with GraphQL and reuse other teams' components.
- **Rollout and testing:** Wire product-defined A/B tests, ramp features gradually, and monitor them with Datadog click and log tracking. Write unit tests (Jest, React Testing Library) and end-to-end tests (Playwright, TestCafe).
- **Pre-launch QA:** Lead bug bashes before launch, identify test cases, and define testing instructions. Ensure follow-up work is complete before feature release.
- **Design system:** Refine features and fix bugs in shared design system components used across Indeed. Support major version migrations.
- **UX Developer:** Worked on a UX team alongside product, engineering, and QA to build internal hiring software used to hire on behalf of large companies. Refined flows and UI from user feedback and added Chromatic visual tests.
- **Accessibility lead (UX Developer):** Led team accessibility compliance and fixed Web Content Accessibility Guidelines (WCAG) issues from third-party audits. Coached teammates on accessible patterns.

UI/UX Developer, Wridz (Austin, TX)

Jun 2021 to Oct 2021

- Refactored the UI of a production React Native ride-share app. Rebuilt components, restructured Redux state, and implemented designs to spec on iOS and Android.

Software Developer, Zollege (Austin, TX)

Feb 2021 to Jun 2021

- Led UX/UI design for internal products and built their React interfaces. Set up GitHub team workflows and delivered features in Agile sprints.

Freelance Web Developer, Self-employed

Dec 2019 to Oct 2021

- Designed and built mobile-first, responsive React and React Native apps and websites for clients, with accessibility and SEO.

Personal Projects

Rhythm Fit: AI workout coach and tracker

React Native, Expo, TypeScript, NativeWind

- Designed and built the full app: onboarding with spotlight overlays, light and dark themes, plate-math calculators, and an iOS home-screen widget and Live Activity. Used Apple's Human Interface Guidelines as a reference.
- Built accessible UI to WCAG 2.2 AA with offline support and background sync. Designed a streaming AI coach chat that turns conversations into scheduled workouts.

TribeTracker: social habit challenges with an AI coach

React Native, Expo, TypeScript, Redux Toolkit, Supabase

- Designed and built a social habit app with streaks, leaderboards, themes, badges, offline-first optimistic UI, and real-time group chat. Work with a nontechnical cofounder who leads the product vision. School districts use the app today.
- Designed an AI coach that appears in standard product UI instead of a chat box. Built weekly summaries from 14 days of check-ins, with a stats-based fallback if the model is unavailable.

Tutti UI: personal design system (work in progress)

React, React Native, TypeScript, Tailwind CSS, Storybook

- Built a component library with one set of design tokens shared between web and React Native. Added accessible-by-default components, semantic dark-mode theming, and early streaming text and chat components. Documented the library in its own Storybook.

GarnerGuitar.com: online guitar course platform

Next.js, TypeScript, Stripe, Supabase

- Designed the learning experience and organized instructional content into easy-to-navigate courses and lessons. Built the site from product design to deployment, with course purchase, lesson access for enrolled students, and sign-in.

Skills

- **Frontend:** React, TypeScript, JavaScript, HTML, CSS, Next.js, React Native, Expo, Redux Toolkit, Tailwind CSS, GraphQL
- **Tooling and testing:** Storybook, Chromatic, Jest, React Testing Library, Playwright, TestCafe, Datadog
- **Accessibility:** WCAG 2.1 and 2.2, semantic HTML, keyboard accessibility, accessibility audit remediation, automated accessibility testing, accessible components
- **Design:** Figma, UI design, prototyping in code, design-to-code, design systems, design tokens, theming, responsive design
- **AI and agentic development:** Claude Code and Cursor (work); Claude, Codex, and Grok Bot (personal projects); agentic workflows, agent skills, OpenAI API integration, streaming UI

Education

- Web Development Certificate, Austin Coding Academy
- Bachelor of Music and Master of Music, Jazz Studies, University of North Texas

Continual Learning

UX research and UI design (Udemy). GraphQL with TypeScript (Apollo Odyssey). AI coding pilot at Indeed.
